Activating GitHub Copilot Subscription and installation in Visual Studio Code

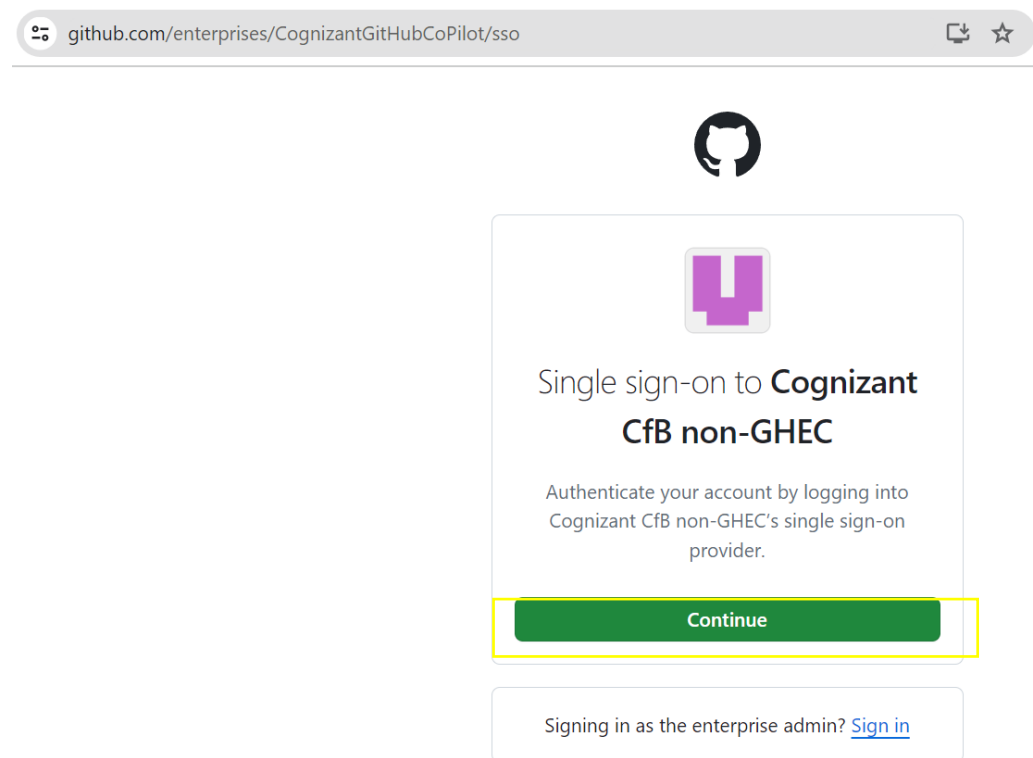

This is a guideline document that will help you to activate **GitHub Copilot Subscription and installing GitHub Copilot in Visual Studio Code**.

Please follow the steps below to activate the GitHub Copilot Subscription provided by Learning and Development team:

Step 1: Login into Cognizant's Enterprise GitHub Copilot

- Login into the URL <https://github.com/enterprises/CognizantGitHubCopilot>
After clicking, you will see the below screen.

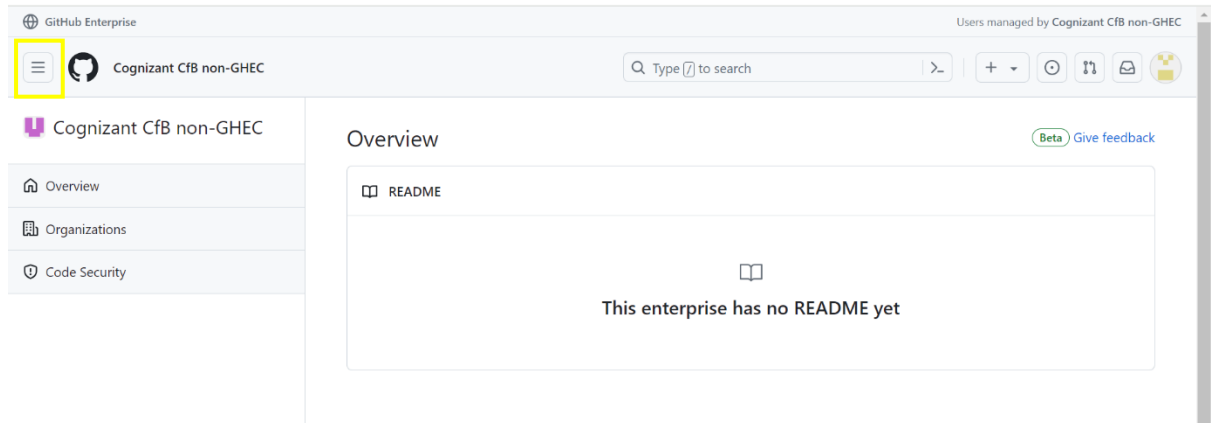

The account will be created only when you have valid subscription. The account will be removed once the subscription expires. Also, the GitHub account will have no repository access.

Screenshot 1

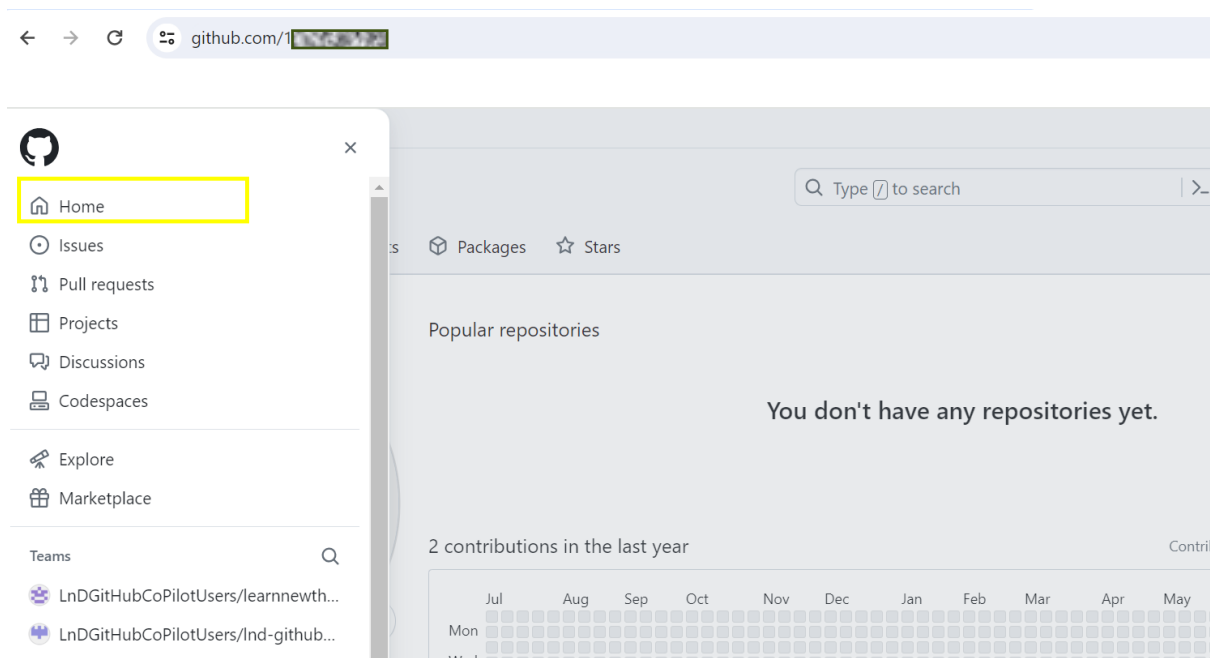

Step 2: Click on continue

- Click on Continue highlighted in yellow in screenshot 1 and you will be redirected to below page, only if you have the GitHub user id.

Screenshot 2

After you click on the **three horizontal lines highlighted in yellow in above Screenshot 2**, the following screen will appear.

Screenshot 3

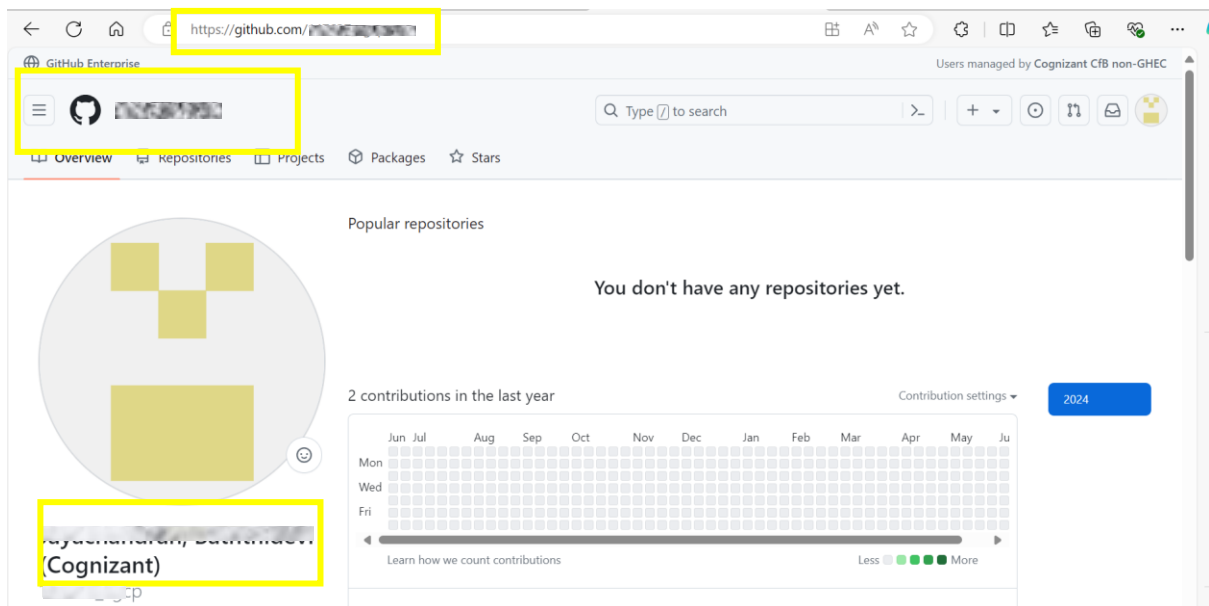

Click on the **Home option highlighted in yellow in above screenshot3**.

Step 3: Verify your GitHub user id

You can verify your GitHub user id by adding your GitHub user id with link <https://github.com/>

Example: <https://github.com/<github user id>>(in the format<<empid>>_cgcp)

verify your account **highlighted in yellow** as shown in the following screenshot4, you will find the details of your GitHub user id.

Screenshot 4

Step 4: Installing GitHub Copilot Extension in Visual Studio Code

Make sure the GitHub Copilot extension is already installed. Once you install copilot you will be getting the below screen **highlighted in red in below screenshot 5**.

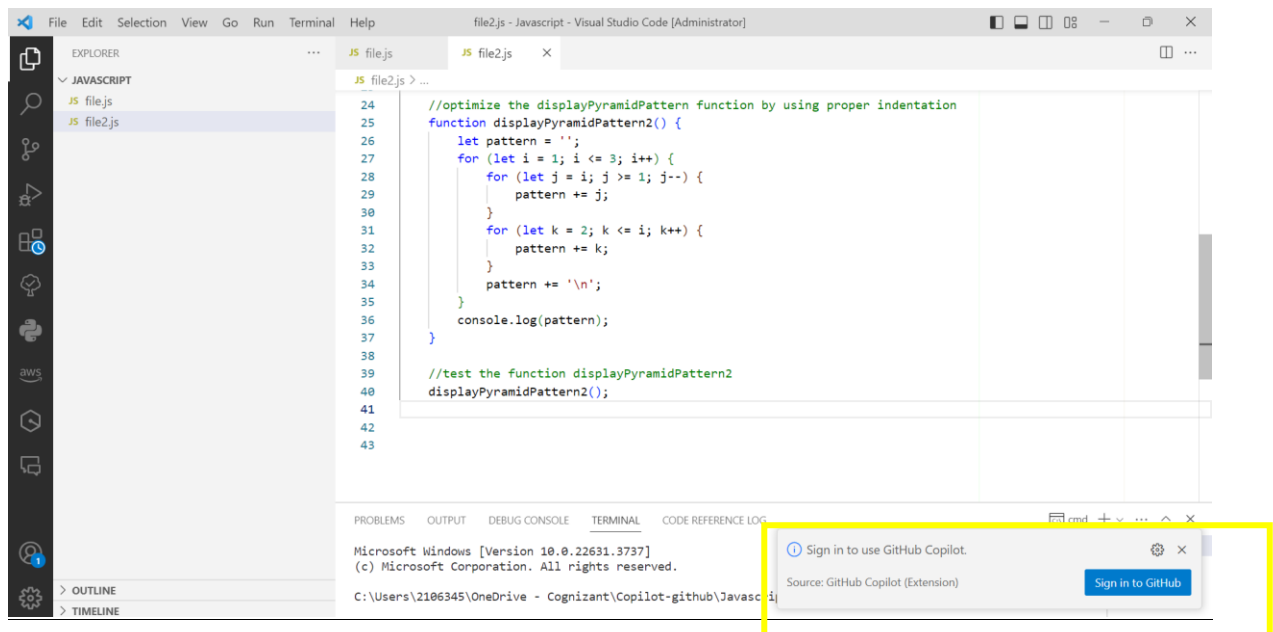

For **installation**, open **Visual Studio Code** you need to click on the icon **highlighted in green on the left side** and the search for copilot in the search bar and then click on install. You can find GitHub Copilot running in the task bar as highlighted in the below screen.

Screenshot 5

Step 5: Sign-in to GitHub

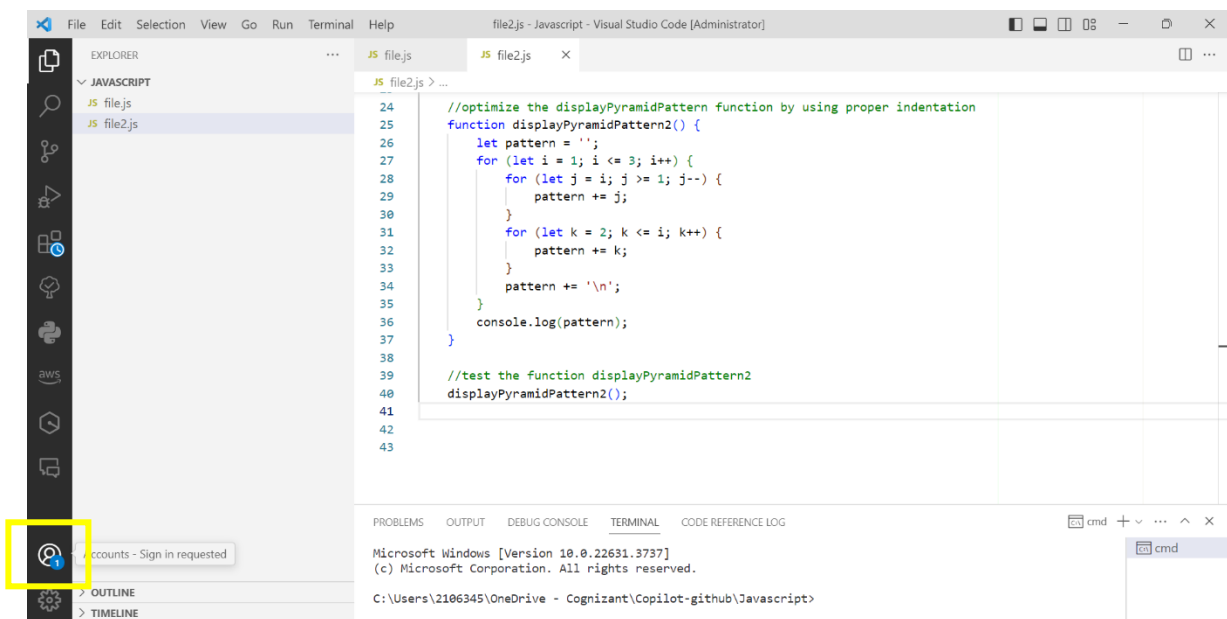

After installation is completed, you will see the notification to sign in as shown in the below screenshot6 ,click on “Sign in to GitHub” highlighted in yellow to sign in.

Screenshot 6

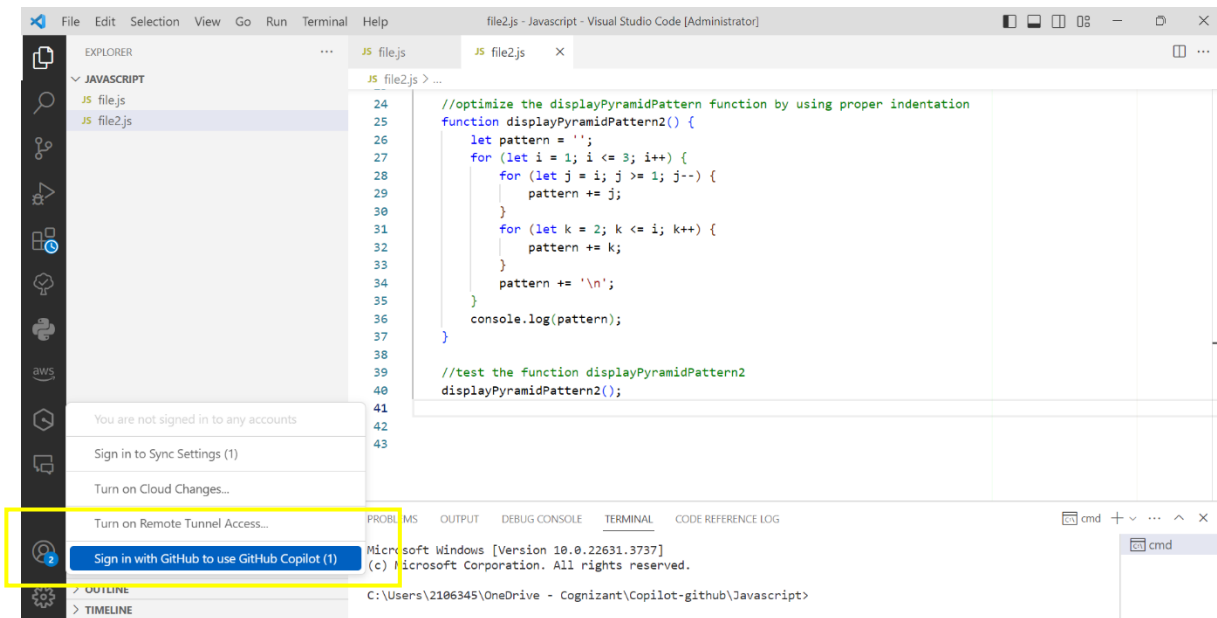

Alternatively, you can use the below option:

Click on the account icon highlighted in yellow in screenshot7, Account -Sign in required will appear.

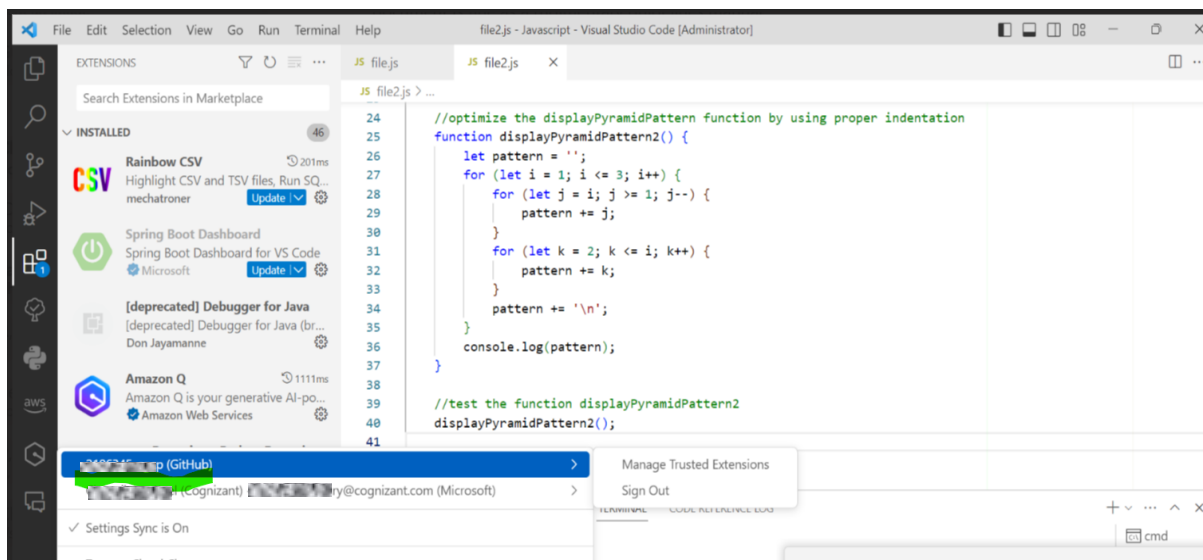

Screenshot 7

Then click on “Sign in with GitHub to use GitHub Copilot” highlighted in yellow in the screenshot 8:

Screenshot 8

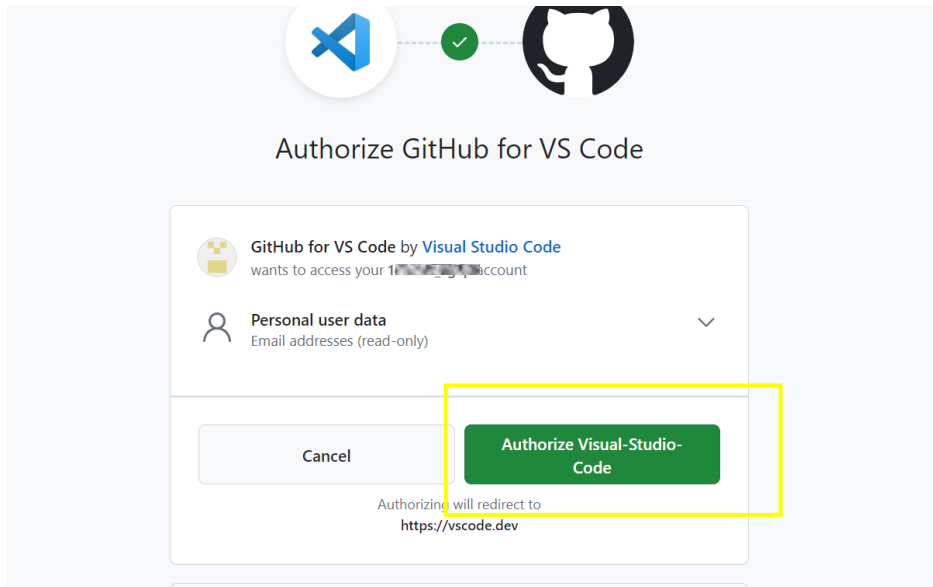

Now you have successfully signed in with your GitHub user id and it will be visible at the bottom left as shown in the below screenshot 9:

Screenshot 9

Step 6: Authorize GitHub

Next, you will get an option to Authorize GitHub for VS Code as shown in the following screenshot 10.

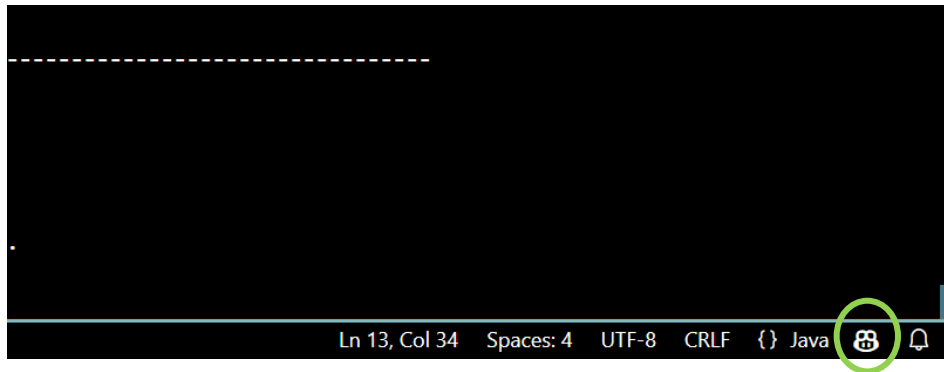

Screenshot 10

Authorize it by clicking on the “**Authorize Visual-Studio Code**” button as highlighted in yellow in the above screenshot 10.

Step 7: GitHub Copilot up and running

You can find GitHub Copilot running in the task bar highlighted in the below screenshot 11.

Screenshot 11

Once you have completed these steps, Copilot will be activated, and you can start using it to generate code suggestions in Visual Studio Code.

Note: If you are facing any issue while activation subscription from your Cognizant laptop/network.

Please access it inside Virtual Lab provided. For lab access, please refer the instructions provided in the MLS path that you are currently undergoing.

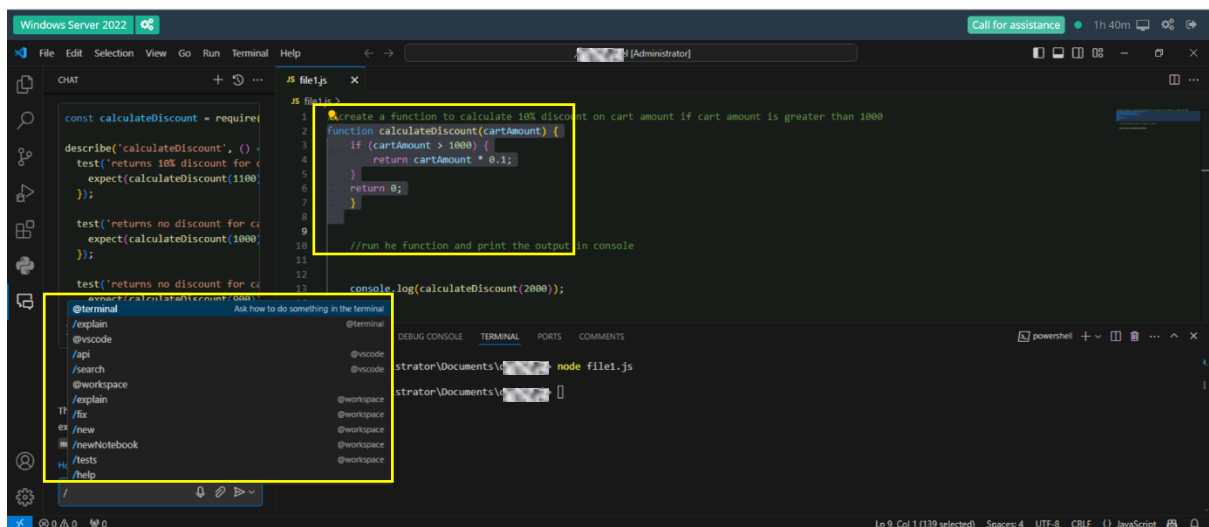

Refer the below steps for usage

This is only a guide to demonstrate the usage of the GitHub Copilot features. you need to write commands/Comments (prompts) that will generate code using GitHub Copilot license provided. The screenshots need to be saved in a document and uploaded to this course code.

Steps to upload the document are in the given link : Assessment Portal_OJT workflow 1.pdf
(Please refer the section OJT Online workflow -> OJT Associate perspective in the document)

Sample 1: Different options / commands

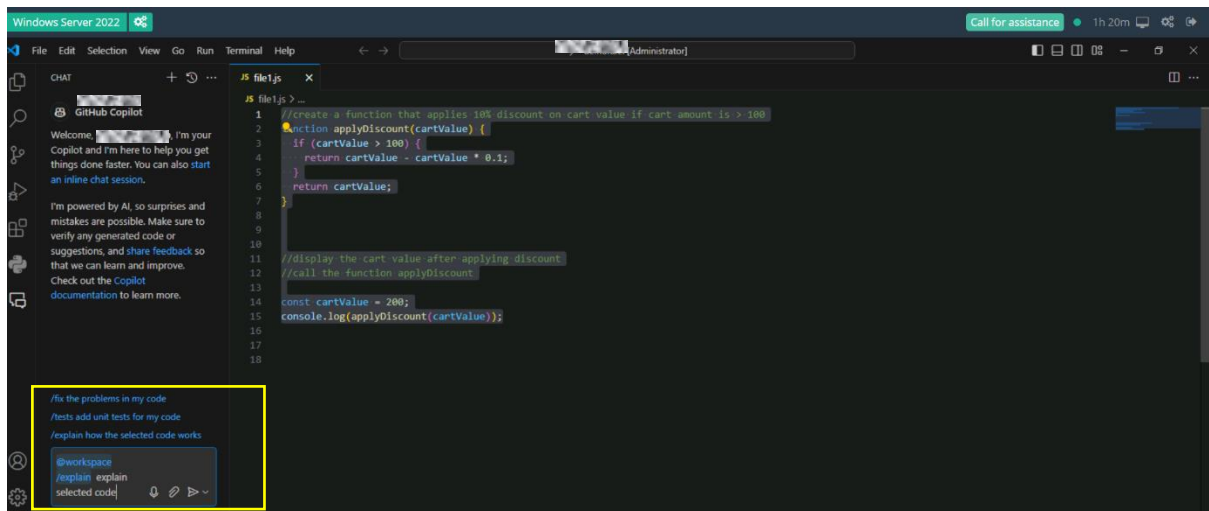

Once you select some lines of code and click on the copilot chat and type"/" different options /commands available will appear as shown in below screenshot 12:

Screenshot 12

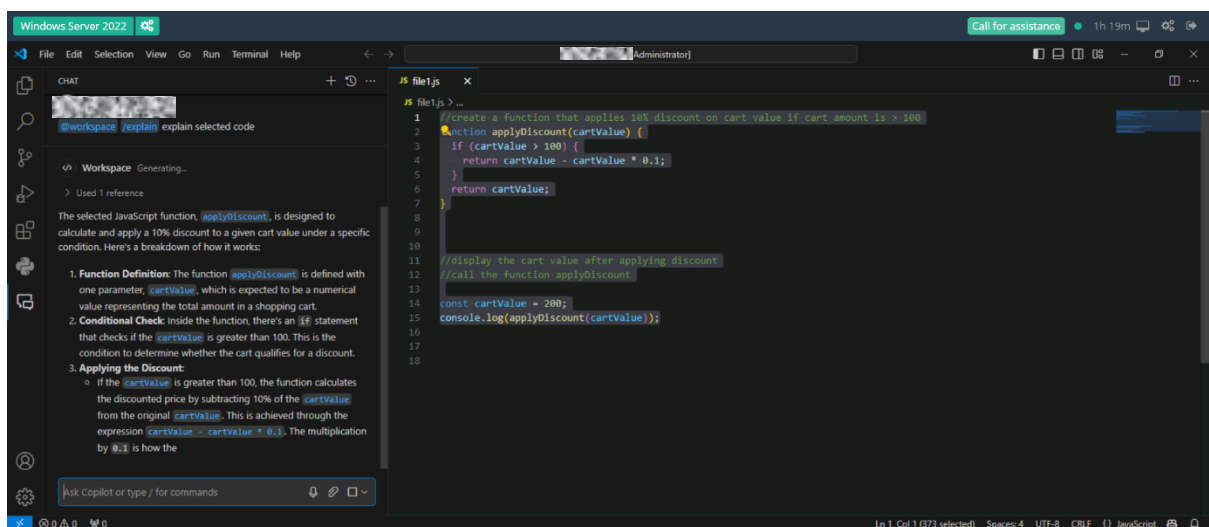

Sample 2: Explain command

After you select the code and give “explain” command in copilot chat as show in below screenshot13

Screenshot 13

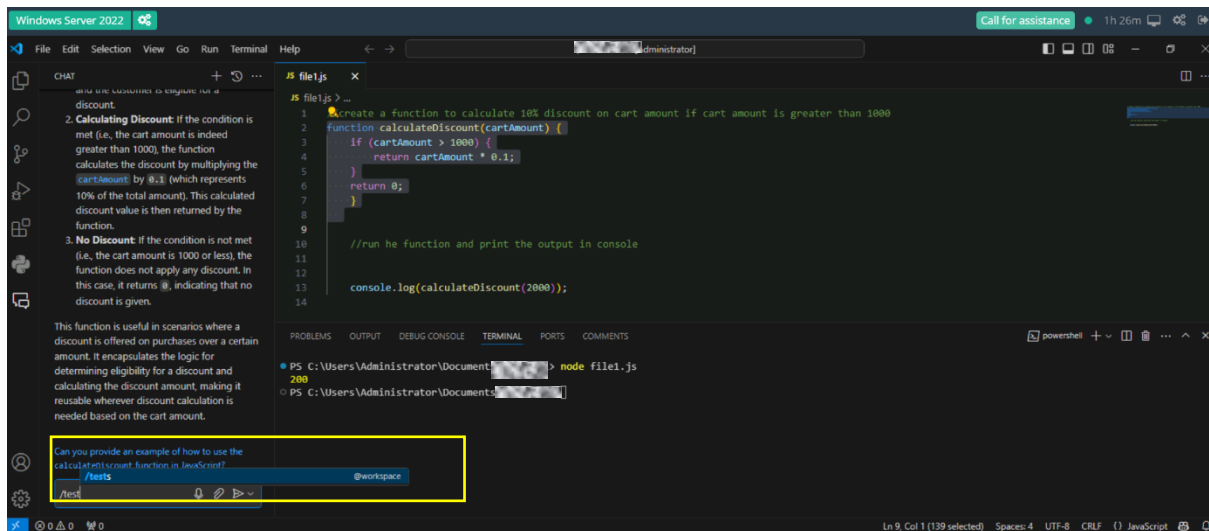

Below screenshot 14 will appear with the output given by copilot chat for “explain” command.

Screenshot 14

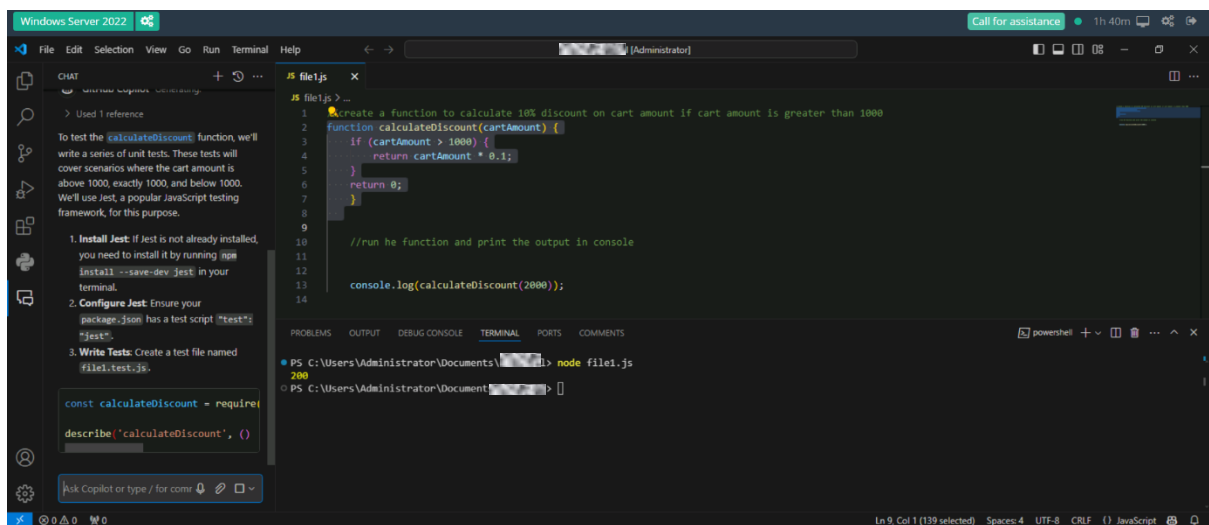

Sample 3: Test command

After you select the code and give “test” command in copilot chat as show below screenshot 15:

Screenshot 15

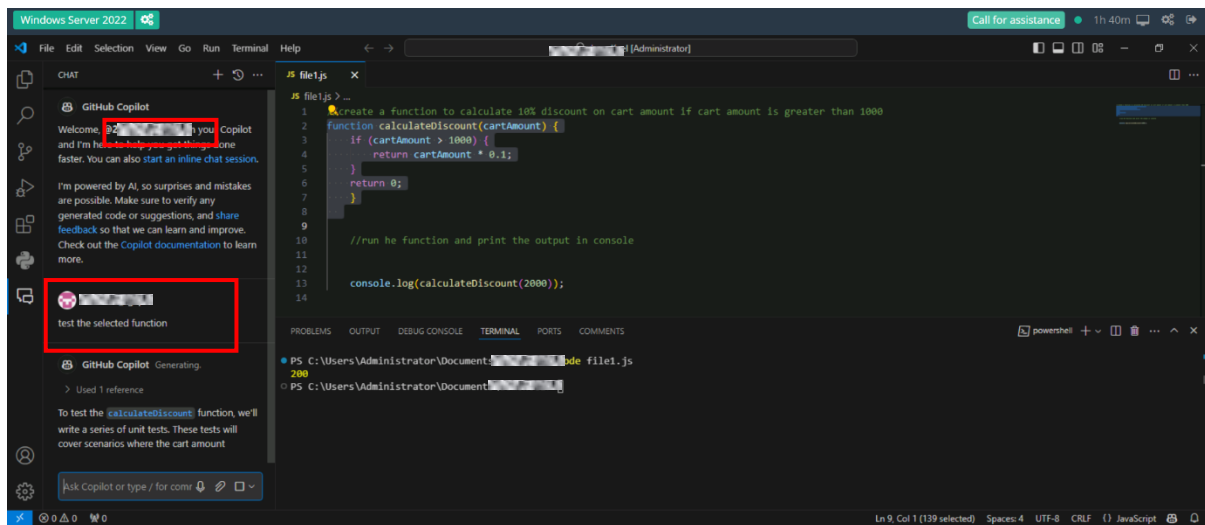

Below screenshot 16 will appear with the output given by copilot chat for “test” command.

Screenshot 16

Unlocking the Knowledge Based Assessment(KBA)

- All the above screenshots are just sample, you can attach whatever you have generated using GitHub Copilot.
- You can use your preferred programming language for coding.
- **Your GitHub Copilot id should be clearly visible in the screenshot attached.** (refer sample screenshot17 below)
- Minimum 5 Screenshots should be uploaded. **Screenshots will be validated against below two criteria.**
 - a) Screenshots should have visible evidence of GitHub Copilot Account activated in the IDE you are working on.
 - b) Screenshots should have visible evidence that you have used GitHub copilot features /chat to increase coding efficiency and productivity by interactively using the Copilot features for code suggestions.
- **Only after successfully uploading the screenshots and getting it verified from L&D team you will be eligible to appear for the KBA. Please check back Cognizant Learn assessment code for details.**
